MVP® | Low-Flow Metering Faucets

Reduce water usage by 50% or more with low-flow outlets and a preset runtime.

Meet sustainability goals with **durable MVP® metering faucets!**

The MVP® metering design prevents faucet run-on, provides improved hygiene, ease of operation, and increased water conservation. When the MVP® is combined with a low-flow outlet, the water savings can be dramatic.

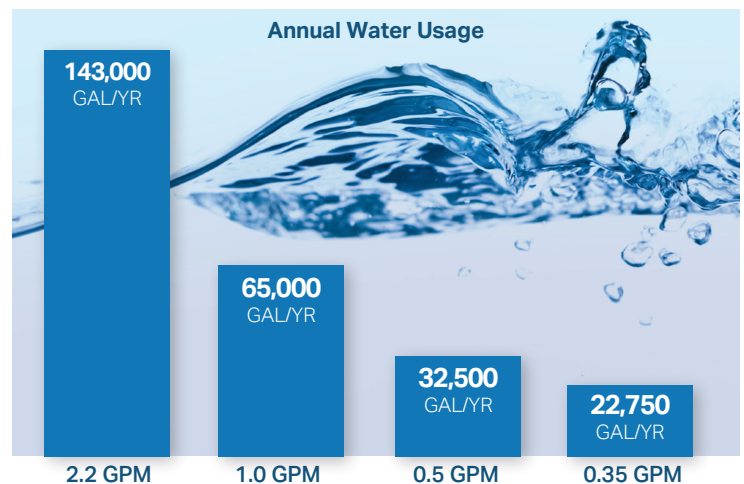

A replacement that pays for itself.

Replacing older manual faucets with MVP® metering faucets that feature a 0.5 GPM or 0.35 GPM outlet can reduce water usage by at least 50%. This chart shows you just how much you can save.

This example illustrates annual water usage for a building with:

- 20 faucets
- Operated 30 times a day
- 25 seconds per use
- 260 days per year

Your Chicago Faucets sales representative can work with you to forecast the savings your facility can achieve with an MVP® upgrade.

333 Series

| Model | GPM | Other |
|--------------------|------|--------------|
| 333-765E39PSHABCP | 0.35 | - |
